Revision Information	
Revision Date:	Febuary 11, 2026
Revised Document Version Number:	1.0
Details of Revision:	Initial Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
383407	NSD-10484	Display issue for Javascript alert message in the Compliance Analysis feature when a target module is not selected.	A minor display issue was found in 25.10 when using the Compliance Analysis functionality and the user did not select a Target Module.This has been corrected to make the alert message readable as it was in prior versions.
	NSD-10479	Change the system logging for memory usage to	For some customers, the allocated memory for Tomcat (Java) may be nearly fully utilized under significantly heavy usage.When this happen, PFL will output information about the memory usage to the system log.If this happens over an extended period of time, this can cause a large amount of

		prevent significant size for the ekp.log file.	logging affecting the storage space consumed by the ekp.log file.This has been modified to reduce that impact.
381904,382179	NSD-10451	For Oracle databases, there was an issue with the query for refreshing user group membership.	Some on-premise customers who use Oracle as their database may have seen an error with the hourly scheduled task "REFRESH_MEMBERSHIP_OF_GROUP: Refreshing membership of all user groups" - when using Organization as a criteria.The query has been optimized to prevent the Oracle error.This is not an issue for PeopleFluent SaaS customers.
382699,382765	NSD-10432	Correcting a minor display issue with exam presentation.	Radio buttons showed as 'squeezed' when the answer choice text is long, leading to inconsistent display with other choices. This has been fixed.
382217	NSD-10413	Database deadlocks causing performance issues for larger customers when enrolling users.	Optimized queries causing deadlocks for customers with a very large amount of enrollments.The queries are used when enrolling users in learning objects or when deleting enrollments as part of deleting users.The queries causing issues have been optimized to mitigate performance impacts due to database deadlocks.
374358,382207	NSD-10427	The New UI Course Details page presented some issues for users who withdrew from a session.	Originally, the New UI Course Detail page, which is used from the Course Catalog or Course Calendar, had a re-enroll option for the session from which a user was withdrawn, but did not list the additional available sessions.This has been changed to allow withdrawn users to select a session for self enrollment.
381754	NSD-10344	Exam License review feature had an issue with Regrade function.	Some of the old Exam Engine review features are not functioning as expected as they are using internal course id instead of the display module id. This has been fixed. NOTE: This does not apply to customers with the standard Learning or the Performance licenses.
	NSD-10169	Refactor of the Reference Resource	The Reference Resource index process looks at all of the files added as References to every active module or session.Prior to this fix, if the same file was included for more than once, it was scanned more than once.For customers with large numbers of

		indexing	modules/sessions with reference resources, this process could take a significant amount of time, especially during restart.The change will scan each file once, reducing the amount of time the index needs to build when the same files are used multiple times each.
