Document Revision

This section lists the initial publication and any changes or updates that follow.

Table 1: Revision Information

Revision Information	
Revision Date:	September 05, 2024
Revised Document Version Number:	2.0
Details of Revision:	Updated Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
343684	NSD-8886	Users logging in through iPaaS are being signed out of PeopleFluent Learning and returned to their identify provider.	With the iPaaS integration for hosted (SaaS customers), when the browser is configured to block 3rd party cookies, browsing the PF Learning product could cause an immediate sign off.This has been fixed.
361247	NSD-9513	Programs are only updated to the "In Progress" status when a required sub-module is launched.	Previously, when an optional (not required) Program sub-module was launched, the Program status did not update to the "In Progress".The status remained in the "Not Started" status.This issue has been resolved.
363087	NSD-9559	Users with duplicate enrollments in a Program module are having issues logging	Previously, a user who had duplicate enrollments in a Program module might have problems logging in.This issue has been corrected.

		in.	
363730	NSD-9581	Fixed issue with migrating enrollments to a newer revision.	To make processing easier. some transcript records are in a cache. The process for migrating transcripts could run into an error when a user's record is not in the cache for customers with a significantly large amount transcript records. The fix is to retrieve a record from the database when it's missing from the cache.
	NSD-9621	Program learning type not available in the Learning Module selector when running the R139 report.	Previously, the "Program" learning type was not an option when selecting a learning module in the R139 report. This issue has been corrected.
362826	PLC-475	R139 Report was able to exceed the limit to the number of parameters allowed in a SQL query, causing an error when running the report.	There's an inherent MSSQL limit to the number of parameters allowed in a SQL query. Previously, the R139 report could exceed the threshold based on the number of sessions involved. An optimization has been made to execute the query in a partitioned fashion to avoid exceeding the limit.
