Document Revision

This section lists the initial publication and any changes or updates that follow.

Table 1: Revision Information

Revision Information	
Revision Date:	November 25, 2024
Revised Document Version Number:	1.0
Details of Revision:	Initial Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
365248	NSD-9660	Optimization of the competency cleanup portion of the Person Information Processor daily task	The Person Information Processor startup/daily task has been optimized to run quicker. A new system configuration 'Number of Past Days to Process Competencies' has been added. If specified, this will apply filtering to make the job more quicker to complete. The fewer past days to process the quicker, but 0 (the default) means no filtering which is the slowest in processing all competencies for all queued users.
365795	NSD-9657	Fixed a timeout issue related to the hourly task that grades expired exams.	The hourly task to grade expired exams that have reached their time limit, has a query which is taking a long time to execute that could potentially block other online exam activities. This has been optimized and fixed.

367053	NSD-9688	Corrected an issue saving users due inadvertently caused by a security fix in 24.09	In 24.09 there was a security fix related to the User Profile > My Pofile tab, which allowed entering resume-like information.The fix inadvertently caused some issues when saving users via the User Editor.
367467	NSD-9698	Issue with Auto-Enroll pausing despite setting to prevent pausing	When pause.autoenroll.onVeryHeavyLoad=false is set in the ekp.properties file, the Auto Enroll offline queue is still pausing because of another limit consideration, this has been fixed to not pause Auto Enroll during heavy traffic.
367541	NSD-9701	Issue with transferring sessions with Organization Constraint settings	The transferability of target sessions was based on the visibility sessions that the user being transferred was able to see. This has been relaxed to consider the visibility sessions of the person doing the transfer which in some cases could be different from the one being transferred.
368457	NSD-9724	Removed limitation on uploading very large files	Previously the system had a limit of 2.15 GB for file uploads.This has been removed, so the maximum can be larger if set in the properties file.
