Details of Revision:	Initial Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
382098	NSD-10366	Issue with learners launching MS Teams virtual classroom sessions.	In a previous release, PFL included the ability to add instructors as Teams Meetings presenters and enrolled participants as meeting attendees.This had an issue where learners could not launch the meeting unless they meeting was fully synced with Microsoft.With this fix, even if the session settings or instructors have been updated after sync, users can launch the course without any issue.
	NSD-10363	R139 performance issue for customers with large amounts of data	The R139 report processes users' job profiles, competencies, and module transcript data to generate the report output.The report processing prior to the fix was in batches of 100 users, to reduce the load on the database.The batch size has been reduced to 10 users, improving memory performance.
374680	NSD-10319	Correcting	Competency status/validity information can be

		issue with the status and expiration of a competency.	incorrectly displayed if there are multiple enrollments involved for the competency course. On the latest enrollment, it's not completed yet but there's a previous completion that is still within the validity period. The system doesn't consider the previous valid completion, the fix is to remember such an event and be used to calculate the correct status/validity info to be displayed.
381255	NSD-10317	Issue with the Person Information Processor when organizations are removed.	There was an issue in the daily Person Information Processor task that resulted from changes to the organization structure.It would cause some users to be skipped in the processing.This has been corrected.
381021	NSD-10300	Correcting issue with learners transferring to Invitation Only sessions.	There was a defect allowing learners to transfer to sessions that were Invitation Only status.This has been corrected.
380805	NSD-10313	Resolved issue when a user with multiple assignments launches an elearning course.	If a user has multiple assignment accounts, and if the user has enrolled a course on another assignment account other than the one that tries to launch the course, there's a problem launching it. This has been fixed.
380434	NSD-10260	Issue when two administrators edit the same learning module at the same time.	Typically, changes are stored in the Learning Object Cache, so simultaneous editing of the same learning module would not reflect the changes.To correct this, there is a new System Configuration item added: Enable “Enable Catalog Editor Navigation Without Cache“ that will allow one administrator to refresh the catalog editor and see changes made by another administrator.
380173,380404,381893	NSD-10255	Erroneous "Error while saving your changes" message appearing user editor.	For SaaS customers using PeopleFluent iPaaS, there was an error message displayed when editing a user via the User Editor.The changes were actually saved, but the error was caused my a missing hidden HTML input tag.This issue has been fixed.
379911	NSD-10235	User Attribute Extension columns were	When the Competency and Certification history functionality was added, a regression defect was introduced that removed the User Attribute

		missing from some Report Wizard reports.	Extensions (Columns) options on Certification History or User Competency types when the corresponding History configuration was disabled.This has been fixed.
357120	NSD-9471	Issue with the Person Information Processor when equivalency rules are deleted.	The Person Information Process daily task uses a cached copy of the equivalency rule targets to process competency calculations, sometimes the cache can become outdated when changes are made so the lookup process within the PIP could fail when there's a discrepancy. The fix is to reduce the likelihood of failures by updating the cached copy whenever a change is made to keep it current.
