

PeopleFluent Learning Resolved Issues Report

PeopleFluent Learning 23.11.1

Introduction

PeopleFluent is pleased to announce the upcoming 23.11.1 update of PeopleFluent Learning. This document provides information about issues resolved in this update.

Document Revision

This section lists the initial publication and any changes or updates that follow.

Table 1: Revision Information

| Revision Information | |
|----------------------------------|------------------|
| Revision Date: | January 16, 2024 |
| Revised Document Version Number: | 1 |
| Details of Revision: | Initial Version |

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

| Zendesk Ticket IDs | Internal ID | Issue Title | Issue and Resolution Details |
|--------------------|-------------|---|--|
| 333403 | NSD-8460 | Changes to loading the User Review screen for Job Profiles | For customers with a large number of users assigned to a job profile, accessing the User Review page from the Gear Icon on the Job Profile list page took a significant amount of time to load. The change does not automatically load all users, but requires the administrator to click the filter button. This is the same behavior as if the administrator had opened the job profile and clicked the User Profile from the left menu. |
| 348984,349428 | NSD-9073 | Program submodule enrollment confirmations were not sent when the enrollment was date specific. | One of the options for automatically enrolling users in submodules of a program is to delay that enrollment until a specific date. In those cases, there was a defect that meant enrollment confirmation emails were not sent. This has been fixed, so participants will receive the notification as expected. |

| | | | |
|--------|----------|---|--|
| 349767 | NSD-9106 | Password was missing in new user welcome email. | When the default password was set in ekp.properties, the New User Welcome Email was did not include the password.This has been fixed. |
| 351237 | NSD-9178 | Editing Module Attributes based on Permissions | If an administrator has Write permission to edit a Module, the administrator will be able to edit the values assigned to the optional Module Attributes, regardless of the permission on the individual attributes.The permission on the attributes themselves still apply when administrators have access to the Module Attribute Categories page where the attributes are created/edited. |
| 351517 | NSD-9114 | Cloning an exam with a long ID caused issues. | The Exam ID field has a limit of 85 characters, and when cloning an exam the process adds seven characters, a dash followed by six numbers (-#####).So if the Exam ID was already long, such as from repeated cloning, this would cause problems with creating the clone.The fix will trim characters from the existing ID to allow the clone to take place.Customers may wish to use the Migrate Exam ID before cloning the exam. |
| 352704 | NSD-9231 | Corrected database error with the R109 report | There was an error introduced that caused a database error preventing the successful run of the R109 report.This is corrected so the report runs successfully. |
