

PeopleFluent Learning Resolved Issues Report

PeopleFluent Learning 25.06.4

Introduction

PeopleFluent is pleased to announce the upcoming 25.06.4 update of PeopleFluent Learning. This document provides information about issues resolved in this update.

Document Revision

This section lists the initial publication and any changes or updates that follow.

Table 1: Revision Information

Revision Information	
Revision Date:	February 06, 2026
Revised Document Version Number:	1.0
Details of Revision:	Initial Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
	NSD-10479	Change the system logging for memory usage to prevent significant size for the ekp.log file.	For some customers, the allocated memory for Tomcat (Java) may be nearly fully utilized under significantly heavy usage. When this happens, PFL will output information about the memory usage to the system log. If this happens over an extended period of time, this can cause a large amount of logging affecting the storage space consumed by the ekp.log file. This has been modified to reduce that impact.
382699,382765	NSD-10432	Correcting a minor display issue with exam presentation.	Radio buttons showed as 'squeezed' when the answer choice text is long, leading to inconsistent display with other choices. This has been fixed.
382217	NSD-10413	Database	Optimized queries causing deadlocks for customers with a very

		deadlocks causing performance issues for larger customers when enrolling users.	large amount of enrollments. The queries are used when enrolling users in learning objects or when deleting enrollments as part of deleting users. The queries causing issues have been optimized to mitigate performance impacts due to database deadlocks.
381754	NSD-10344	Exam License review feature had an issue with Regrade function.	Some of the old Exam Engine review features are not functioning as expected as they are using internal course id instead of the display module id. This has been fixed. NOTE: This does not apply to customers with the standard Learning or the Performance licenses.
	NSD-10169	Refactor of the Reference Resource indexing	The Reference Resource index process looks at all of the files added as References to every active module or session. Prior to this fix, if the same file was included for more than once, it was scanned more than once. For customers with large numbers of modules/sessions with reference resources, this process could take a significant amount of time, especially during restart. The change will scan each file once, reducing the amount of time the index needs to build when the same files are used multiple times each.
