Revision Date:	July 08, 2026
Revised Document Version Number:	2.0
Details of Revision:	Issues Updated

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
319085	NSD-7998	The Close button on User Attribute Configuration was not working when a user did not have permission to configure the attribute.	When a user does not have permission to configure the attribute, there was a Close button that appeared with the message.This button did not close the window, so it has been removed.Users can use the browser's back button, or the breadcrumb on the screen to navigate back to the User Attribute Configuration page.
323760	NSD-8201	Minor UI issue with the £ sign in performance appraisals.	In the performance appraisal functionality, only available with the Performance license, there was a minor issue where the £ sign changes to the HTML code £ as plain text, which is not rendered correctly in the UI.This has been fixed.

343432,362398,383108	NSD-8793	Minor UI issue in the Catalog Editor > Session > Participants screen	When viewing the initial page for the Participants, the number of participants was including users with accounts that were closed and the records were cleaned up because of the Closed Account Enrollment Cleanup Interval configuration setting. This was evident when moving to the next page of participants. This has been corrected.
351703	NSD-9123	Issue cloning programs, some settings were not copied correctly.	The process of cloning a program and selecting the option to clone all sessions, some settings were not copied correctly. This was noted on the Cost Information page, where the Charge Per Registration > Program Cost Calculation setting was populated. This has been corrected.
352741,368192	NSD-9204	Issue with duplicate language bundles when using the training records loader and creating new sessions.	The Training Record CSV loader, when creating new sessions is selected, the system was first updating the resource string before creating the new session. This has been corrected going forward. Customers with this issue will have to correct existing data via SQL in the database.
353692	NSD-9307	Certifications with an expiration reminder message could not have the template removed.	There was an issue removing the email template assigned to a certification as the Expiration Reminder Message. The user could delete the entry and save, but this was not removed in the database, so the email template remained assigned. This has been corrected.
364267	NSD-9639	Minor language issue on the Enrollment Confirmation screen	The enrollment confirmation screen was displaying in the primary language instead of the language bundle that matches the user's language. This has been fixed so the language bundle is consistent during the enrollment process.
362459,364996	NSD-9642	Competency selector issues with R112 and R420	The R112 and R420 reports include a requirement to select a competency. The Competency Selector window includes the ability to filter by Competency Model, which

			opens another window. The Model selected would not pass back to the Competency Selector. This has been corrected.
362820	NSD-9695	Issue with Enrollment Confirmation on self-enrollment to Program assigned modules.	Enrollment confirmation emails are not typically sent for Program assigned modules when they are automatically enrolled as part of the program. However, there is a need to allow this when the participant must manually self-enroll. This has been corrected, so the assigned module's Enrollment Confirmation template is sent when self-enrolling.
364003	NSD-9697	Minor UI issue with the Course Catalog when filtering for a module.	Programs displayed in Calendar when a specific module is selected as a filter. The filter for a specific module had incorrect settings. This is corrected to only display sessions for the selected module.
366765	NSD-9729	Update the start_date parameter display when there is no start date.	Previously, emails would populate "Unkown" for the start_date parameter if there was no start date. This has been changed to "Date to be confirmed."
368650	NSD-9772	Issue with the Course Calendar for some users.	Users who have their transcript records updated to Administrative Entry, for any number of reasons, were seeing these records create a schedule conflict when browsing the Course Calendar. The schedule conflict check did not filter out this status; this has been corrected.
374116	NSD-9936	Error on the Instructors > Qualified Courses tab when using the results per page.	When changing the "Results per page" selection on the Qualified Courses page, the system would error. This has been corrected.
344804,376863	NSD-10046	Error viewing transcript history when a previously enrolled session was deleted.	An error would display when attempting to view the transcript details when the user was enrolled in one session, transferred to a second session, and the first session was deleted. This has been corrected to allow the page to display.

378027	NSD-10094	Refactor Allocate Seats task	The Allocate Seats task is a daily background task that processes users on waitlists that are set up for automatic processing. For customers with large numbers of active sessions, the previous process could take a significant amount of time. This has been refactored to reduce the processing time.
380007	NSD-10232	Past sessions displayed for Virtual Classrooms when transferring sessions	In the Current Courses page, the option to transfer sessions was displaying past sessions when a user needed to transfer. This has been corrected so only future sessions are available.
380773	NSD-10311	Problems downloading an attachments to External Training with comma in filename	When a user uploaded a file with a comma in the filename as part of the External Training functionality, it could not be downloaded correctly. The change wraps the filename in double quotes so the browser does not think it is a multi-part attachment. Such files can now be downloaded as expected.
381817	NSD-10356	Issue with Job Profile manager showing profiles in catalogs without permission.	There was a defect in the Job Profile Manager page where the default view showed job profile in catalogs the logged in user did not have permission to view. This has been corrected, so the permission functionality is applied when the page loads as well as when the user searches or browses.
381572,384300,385006,385124	NSD-10394	Issue with the Save button in the Question Editor	When a question is marked Open for Editing on the Preview/Approval tab, making the status Work in Progress, the Save Icon will now be available so changes can be made without reloading the frame/window.
382105,382114,382175,382183,382222,382708,383622,383641	NSD-10405	Tasks disappearing from approval queue	For some customers, tasks that were pending approval were disappearing from the queue for the designated approvers. To correct for this, a new daily task will review the transcripts for task and ensure the approval process is restored correctly, showing the pending approval.

381994	NSD-10409	Exams showing N/A in section navigation despite questions being answered.	This applies to exams using the "Allows Section/Question Navigation" setting. The exam question status is stored in the cache (in memory), but there are some conditions where this can get out of sync during an exam attempt. While the questions that were answered, and saved in the database, there would be an issue until the cache is rehydrated. This issue has been fixed.
382414	NSD-10411	Minor UI issue on Job Profiles when filters are applied	The Job Profile management page includes the ability to filter for active or archived profiles. When a filter was applied, and the user changed the number of results to display, the filter was no longer applied. Additionally, when the number of results was changed, then a filter was applied, the results reverted to 10 per page. This has been corrected, so changing the number of results does not affect the filters or vice versa.
382044	NSD-10442	Issue with skins and external links in the navigation.xml file.	There was an error generated when one of the links in the navigation.xml does not exist. This error prevented users with that skin from logging in. The issue has been fixed to allow the login, while the link may still not function correctly. Correcting the link requires editing the XML file and uploading it via the Screen Layout Manager.
382721	NSD-10448	Issue with exam module being marked failed despite additional attempts available.	This applies to customers with a CFR license which enables electronic signature. The course completion esignature facility is always made available even when the course is not ready to be marked complete, for ex. like remaining attempts for the user to redo the course. This has been fixed to check criteria before making the facility available.
382179,383198	NSD-10472	Error in User Groups when selecting a User Attribute Extension value.	In User Groups, when changing a value for a User Attribute Extension, the value was not saving correctly. This has been corrected, so the

			new value will replace the existing value.
383606	NSD-10506	Issue with capitalization of Exam ID in Exam Data Loader	The Exam Data Loader will force the Exam ID to be all uppercase when using the loader to add an exam. However, there are instances with some older customers where existing exams has mixed case (Exam_Id), and there are issues when using the Exam Data Loader to with the update action. There are also issues on the Exam Listing page when there are exams with mixed case IDs. These issues have been corrected.
383288,385084	NSD-10507	Report Wizard issue with Certification Award Date and Expiry Date column selectors.	There was a reported issue where the columns to select the Award Date and Expiry Date were not available to select in the Report Wizard. This has been corrected.
383770,383816	NSD-10511	R139 Report - Issues with modules that have equivalencies	When a user has completed both a module assigned to a competency as well as the "substitute" as defined in Equivalency Rules, the report was not showing the primary module correctly. This has been corrected.
384225	NSD-10545	Issue selecting criteria in the Signoff Option for the Task learning type.	There was an issue when attempting to select criteria for the Signoff Option step for Task learning modules. Selecting individual users worked, but adding dynamic criteria such as Role or Organization was not working properly. This has been corrected.
383987	NSD-10577	Competency expiry dates were sometimes missing or not displayed correctly in the UI, especially after data imports or course substitutions.	The competency expiry date display issues were related to data synchronization, import processes, and the handling of substitute courses. To resolve this issue, substitute course expiry info is hidden in the UI when it is outdated or incomplete. As part of this fix module expiry dates will be excluded from R139 reports when they were not relevant or available - based on the same criteria for hiding the date in the UI.

384208	NSD-10605	Issue with R139 report not showing competency expiration correctly	The R139 was not showing the expiration of some competencies, this was corrected with a change to how the report retrieves the expiration dates from the database.
383770,385107	NSD-10607	Minor language key issue on R139 report.	A minor language issue was created in 25.10.3 using "Deadline Expired" instead of "Expired" when fixing a defect.This is corrected to use the "Expired" language string.
384319	NSD-10621	Issue with the Assign Training screen when selecting a program session using the drop down configuration	When using the Assign Training function, and the "Directly display all learning program sessions." system configuration setting is disabled, the session selection drop down will have a Go button.This was not working, because of a regression issue in 26.02.This has been corrected.
385040,385113	NSD-10624	R139 issue with the module status after the valid for period expired	There was a minor issue in the R139 report that would incorrectly show a module as being completed after the validity period for the module against the competency.The issue was caused when an earlier enrollment was completed, but there were later enrollments where the user was withdrawn.This has been corrected to show the correct module status.
385083	NSD-10625	Issue opening Exams with a period in the ID.	In 25.10, there was security update related to the Content Security Policy header.That change caused a downstream issue on the Exam Manager page where Exams with periods in the IDs were mistakenly treated as CSS selectors, and not opening when clicked.This has been corrected.
385130	NSD-10635	issues printing Exams with a period in the ID from the Exam Schedule page.	In 25.10, there was security update related to the Content Security Policy header.That change caused a downstream issue on the Exam Schedule page (part of the limited Exams license) where Exams with periods in the IDs were mistakenly treated as CSS selectors, and not opening when clicked.This has been corrected.

385433	NSD-10668	Increased the maximum length of the Job Title input fields	The database allowed 85 characters for the Job Title, but the UI was setting the maxlength parameter for the <input> field to 50. This has been changed to 85 in the User Editor as well as the User Profile pages. The content of the field is not affected.
