

PeopleFluent OrgPublisher Release Notes

PeopleFluent OrgPublisher 26.07

Introduction

PeopleFluent is pleased to announce the upcoming 26.07 update of PeopleFluent OrgPublisher. This document provides information about issues resolved in this update.

Document Revision

This section lists the initial publication and any changes or updates that follow.

Table 1: Revision Information

Revision Information	
Revision Date:	July 24, 2026
Revised Document Version Number:	1.0
Details of Revision:	Initial Version

Issues List

The following table includes the client-reported and internally-found issues addressed in this release.

Table 2: Issue Descriptions and Resolutions

Zendesk Ticket IDs	Internal ID	Issue Title	Issue and Resolution Details
381302	PFTMP-3495	Calculated field outside authorizations outputs as \$0.00 on powerpoint	Previously, in secured charts, numeric fields that were secured were showing “0” values when exported to PDF/PPT.This has been corrected so those values are not displayed.
381036	PFTMP-3494	Exporting to PDF/PPT results in timeout	Previously, migrated charts contained incorrect values for the text area size object for the Legend.Additionally, the red colour value for the negative number format did not have the 6 character value.This has been corrected.
381039,384304,384565	PFTMP-3493	Exporting more than 2 levels gets a Timeout message	In a previous fix that added a timeout value, it was hard coded which resulted in any export taking more than that hard coded value, the

			export would fail. This has been corrected and the timeout period can be set in the General tab in the “Photo Timeout Limit” parameter.
	PFTMP-3489	Selecting a person in Search dialog who is in hidden group elicits incorrect response	In previous versions, when a manager and the people in their span of control belong to a hidden position type, clicking on someone in that span in the Search dialog had two different incorrect responses. This has been corrected to: - Highlight the manager’s box if that manager is hidden, and display Box Title and Job title only - If someone under that manager is found and selected in the Search, they are correctly displayed. If they are hidden, the “record cannot be displayed” message is shown as expected.
375715	PFTMP-3473	Deleting position types causes chart to become unuseable	Previously, a migrated chart with custom position types AND the data set used to publish the chart contains records with those custom position types, deleting any of the custom position types in the migrated chart will cause the chart to become unuseable. This has been corrected.
372350	PFTMP-3440	Email field is not clickable	Previously, custom fields of "Email" type did not get rendered as a mailto: hyperlink. This has been corrected so “Email” type fields are rendered correctly so they are clickable and triggers the default email client.
371437	PFTMP-3436	Previously, in secured charts, numeric fields that were secured were showing “0” values when exported to PDF/PPT. This has been corrected so those values are not displayed.	In previous versions, exporting a chart set to a language other than English resulted in PDF’s and PPT’s displaying the word "Legend" in English, i.e. it does not get translated. This has been corrected so that the localised version of the word “Legend” displays in PDF/PPT.
334972	PFTMP-3279	Add 'Export to Excel' to main chart	Export to Excel functionality has been added to the main chart toolbar. This functionality exports data for

			displayed boxes in the charts, and follows the formatting of the Search dialog columns.
329552	PFTMP-3256	Assistant records that share a box is not honouring Pos Seq ordering	In previous versions, when there are multiple records in a box and they are all Assistant record types, the ordering did not honour the Position Sequence values and was forcing Open Position records to the bottom. This has been corrected and the Position Sequence value is respected when it is present.
328912,356775	PFTMP-3253	Migrated charts created in non-English legacy OrgPublisher is causing the "Name" field to fail	In previous versions, charts created in legacy OP Spanish, German, Italian, Portuguese, or French and then migrated, will result in the "Name" field to fail in searches. This has been corrected and migrated charts' Search works as expected.
322897	PFTMP-3246	Roles/User - cannot delete charts	In previous versions, there was an issue where charts could not be deleted due to an issue with Roles. This has been corrected by automatically enabling and then dimming "Unlock all charts" when the "Manage all charts" option is enabled.
